Tue, 07 Aug 2018 12:05:00 GMT - In fluid dynamics, turbulence or turbulent flow is any pattern of fluid motion characterized by chaotic changes in pressure and flow velocity. It is in contrast to a laminar flow regime, which occurs when a fluid flows in parallel layers, with no disruption between those layers.. Turbulence is commonly observed in everyday phenomena such as surf, fast flowing rivers, billowing storm clouds, or ...

Mon, 30 Jul 2018 13:19:00 GMT - Wake turbulence is a disturbance in the atmosphere that forms behind an aircraft as it passes through the air. It includes various components, the most important of which are wingtip vortices and jetwash. Jetwash refers simply to the rapidly moving gases expelled from a jet engine; it is extremely turbulent, but of short duration.

Fri, 10 Aug 2018 04:02:00 GMT - La turbulence dÃ©signe l'Ã©tat de l'Ã©coulement d'un fluide, liquide ou gaz, dans lequel la vitesse prÃ©sente en tout point un caractÃ©re tourbillonnaire : tourbillons dont la taille, la localisation et l'orientation varient constamment. Les Ã©coulements turbulents se caractÃ©risent donc par une apparence trÃ©s dÃ©sordonnÃ©e, un comportement difficilement prÃ©visible et l'existence de ...
